

# The environment & gardening WG

by Noah, Lisa, Alexandra, Ellie and Marlene

# OUTLINE

OUR PLANTS

INSECT HOTEL

WHAT ELSE WE DO

**Our plants**

# The common snowball

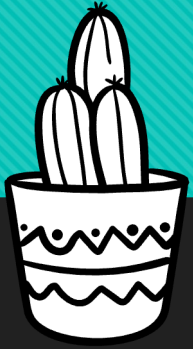

- It can grow 2 to 5 meters tall.
- The leaves are 8 to 12 cm long and have an autumn shade of red.
- The Latin name is *Viburnum opulus*.
- The flowering period is during the late spring (May – June).
- The common snowball is native to Germany.

A picture of our common snowball

# The apple rose

- It can grow 1.5 to 2 meters tall.
- The leaves can grow 1 to 4 cm long.
- The Latin name is *Rosa villosa*.
- The flowering period is in June and July.
- The apple rose is found throughout most parts of Europe.

of the other plants in our schoolyard**

# our insect hotel

- We added bamboo sticks and other natural materials to the insect hotel.
- To prepare them, we hollowed out the bamboo sticks by hand.

# Why we help insects?

- Insects are important for nature and the environment.
- Without insects, there would be no fresh fruit and no honey.
- Insects are a vital part of the food chain for many animals.
- 95% of all animal species are insects, but many are endangered.
- protecting insects is very important

# How we help insects?

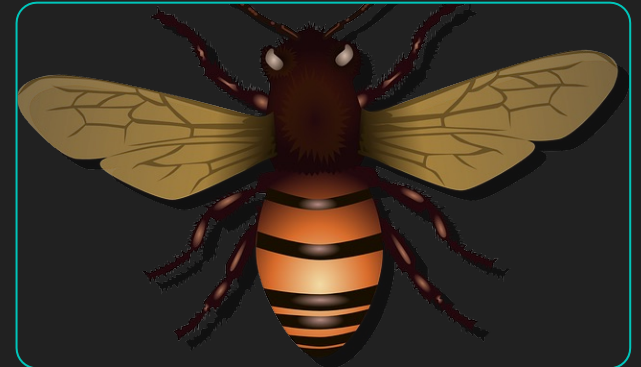

- We are building an insect hotel.
- We are going to develop sand gardens.
- We plant native and insect-friendly plants.

# What else we do

- We water the plants every day so that they can grow well and quickly.
- We sow plants that we can later transplant into our garden bed once they are strong and large enough.
- We build birdhouses.

**Goodbye  
&  
Thank you for  
your attention!**
